

## **Progress Update - St. George's Lodge**

**19th December 2007**

In November St. Georges Lodge successfully achieved protocol 181, namely all eight blocks are now at watertight stage including completion of all six floors and roof.

As the building is now weather tight the internal works will commence and continue through the Ski season. For the internal works, we will be using the most reputable foreign suppliers in order to ensure the highest quality.

The building is on schedule to be completed during the summer of 2008 with habitation in time for the Ski season of 2008.

Visitors to Bansko can now view 2 show room apartments at St George's Lodge.

As you can see the new season has started with the best snow in years!
